2. Fundamentals of World Wide Web 3

->Decentralization is one of the basic tenets of Web 3.0. In Web 2.0, computers use HTTP as unique web addresses to locate information stored on centralized servers at fixed locations. However, in Web 3.0, information is decentralized, which means it can be stored in multiple locations simultaneously.

3 SDLC of student management system.

->1. Analysis

2. UI/UX Design

3. Implementation

4. Testing

5. Deployment
